U.S. DEPARTMENT OF AGRICULTURE
PRODUCTION AND MARKETING ADMINISTRATION
RICHMOND, VIRGINIA

FOREWORD

This report is primarily a compilation of statistical data with respect to the several farm programs administered by the Production and Marketing Administration in Virginia during the calendar year 1951. It is the fifth in a series commenced in 1947.

Since PMA activities fall into three principal divisions, this report is presented in the following sections:

(1) Agricultural Conservation Program, (2) Marketing Quota Programs, and (3) Price Support Programs. Other activities carried out chiefly through the Agricultural Mobilization Committees relate to production goals and miscellaneous defense activities.

The purpose of this report is twofold -- to provide PMA committeemen and other agricultural workers with information that is not available through any other source, and to acquaint other persons interested in agriculture with the work of PMA.

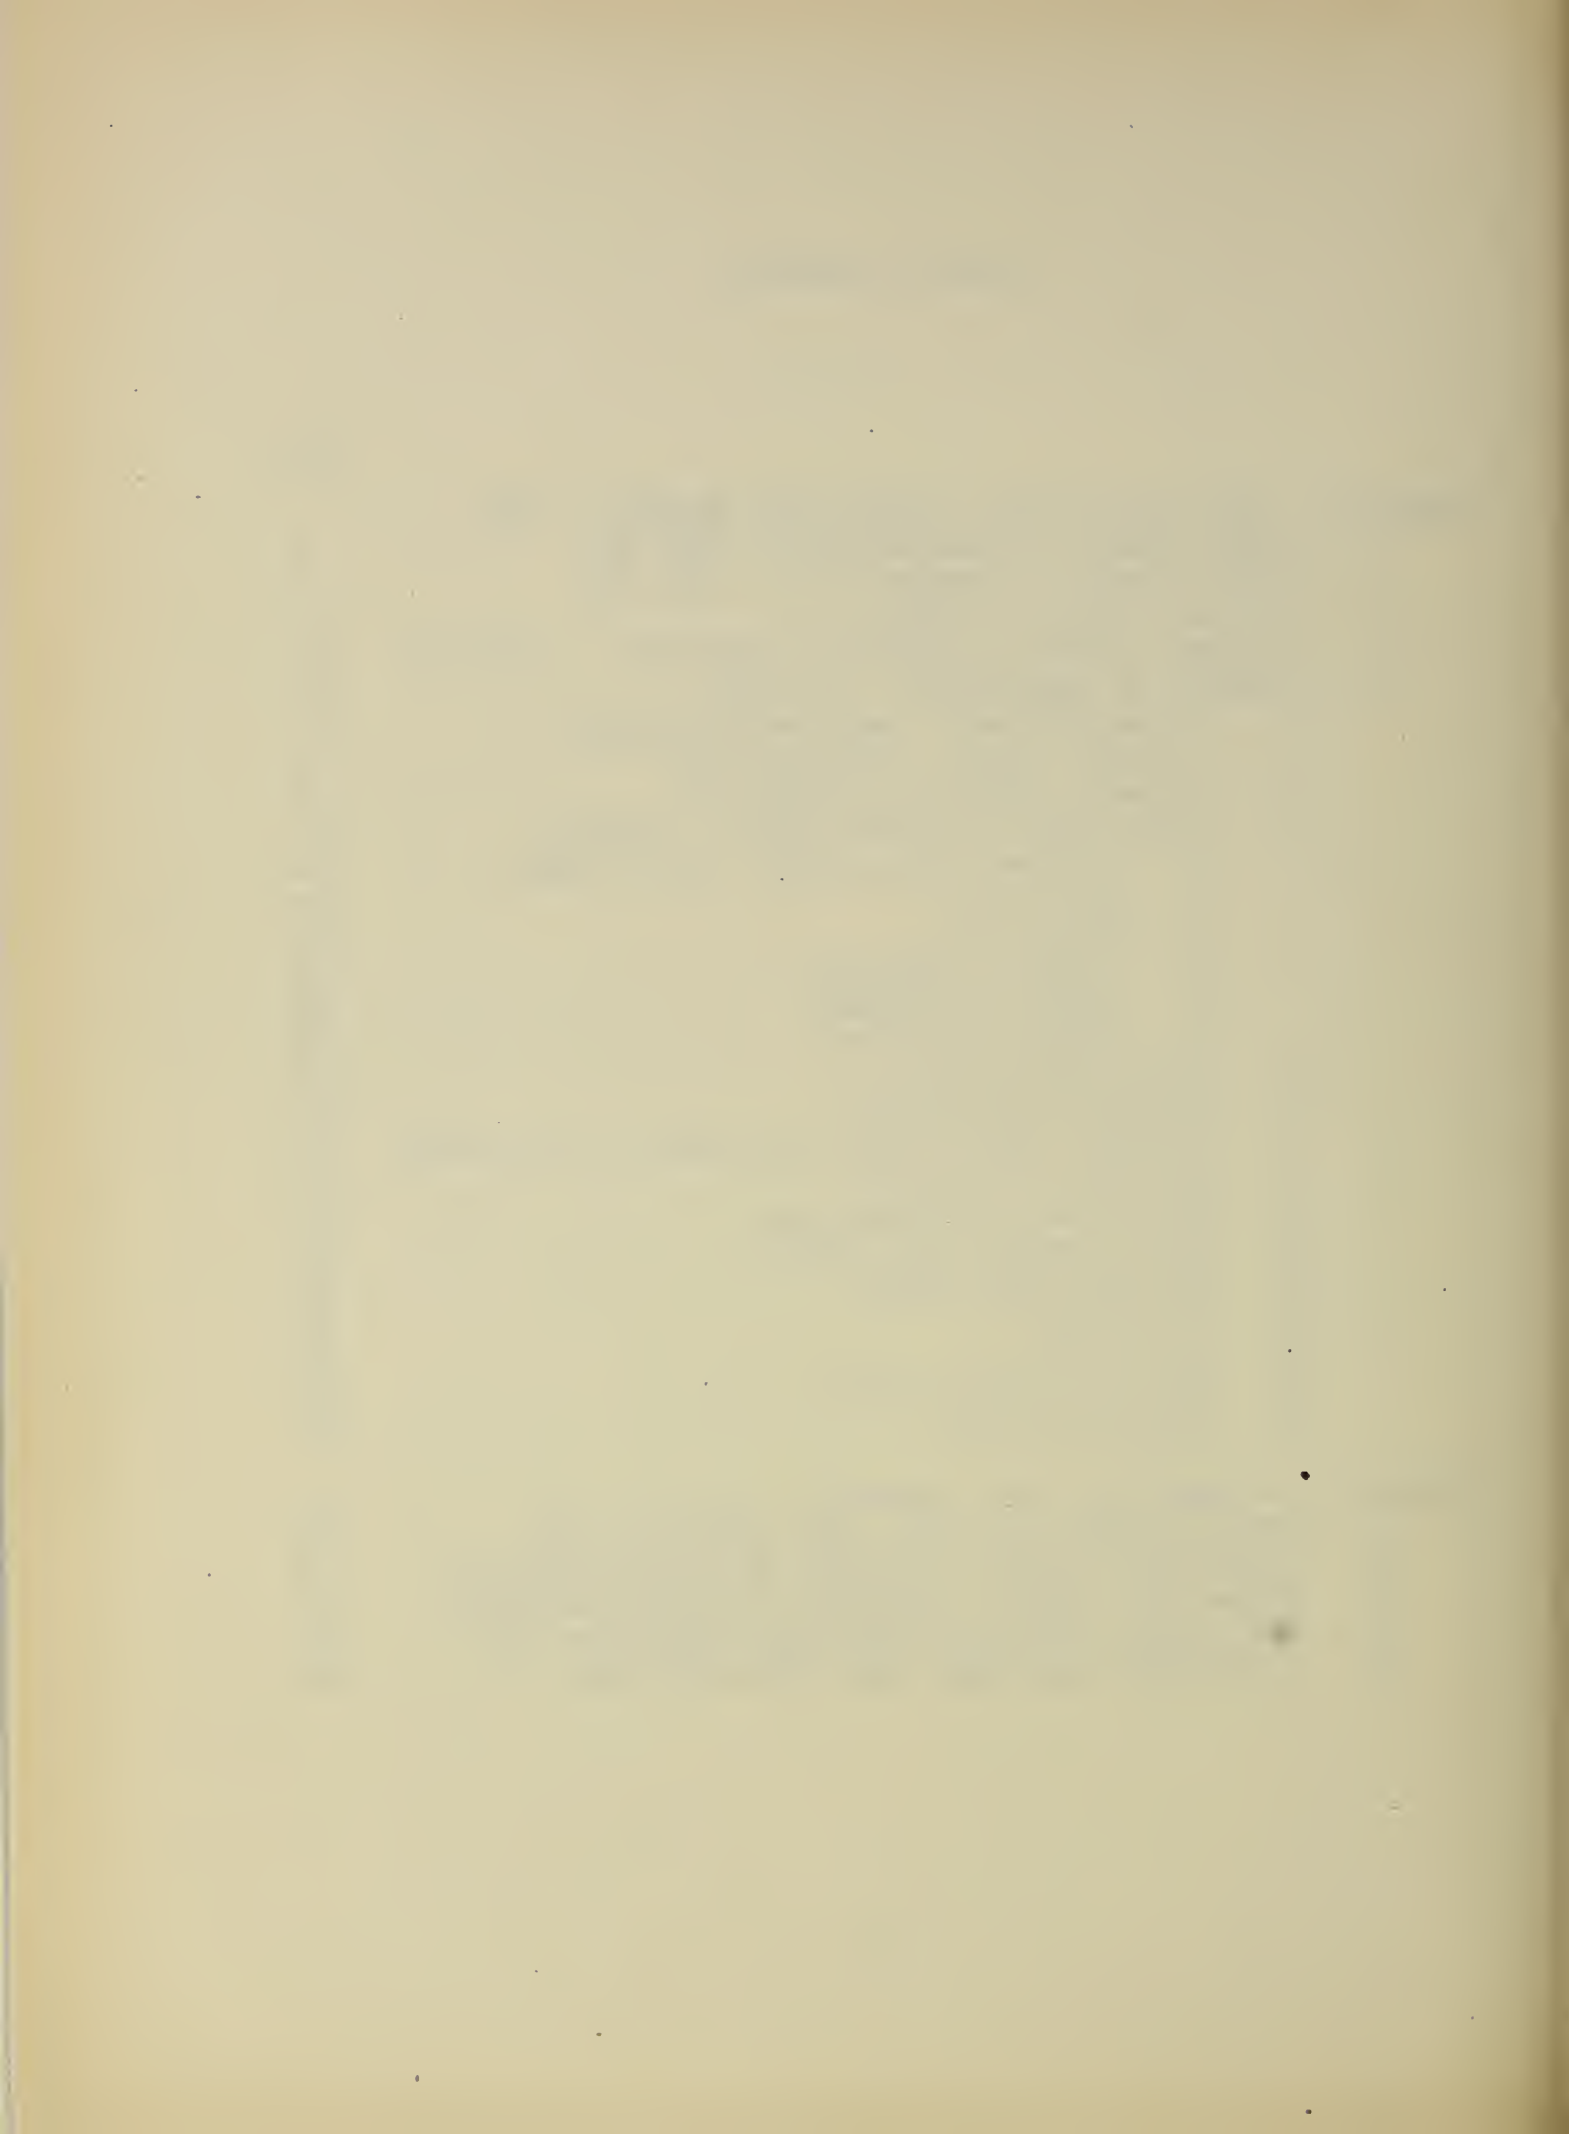

We acknowledge with full appreciation the help received from our committeemen, county office staffs, other persons and agencies in compiling the information included in this volume. We sincerely hope that it will be useful to those whom it will reach.

Virginia PMA State Committee

TABLE OF CONTENTS

	Page
SECTION I - THE AGRICULTURAL CONSERVATION PROGRAM - 1951	3
A. STATE SUMMARY OF ACREAGE DATA - 1951 ACP	4
B. STATE SUMMARY OF PAYMENT DATA - 1951 ACP	6
C. 1951 ACP SIZE OF PAYMENT	8
D. PER CENT OF TOTAL PRACTICES CARRIED OUT - 1951 ACP	11
E. SUMMARY OF PERFORMANCE - 1951 ACP	14
1. Standard Ground Limestone Equivalent	14
2. Superphosphate - 20% Equivalent	16
3. Potash - 50% Muriate Equivalent	19
4. Green Manure or Cover Crops - Summary	21
a. Crimson Clover, Vetch, Winter Peas	23
b. Ryegrass	24
c. Small Grain	25
d. Cowpeas - Soybeans	27
e. Summer non-legumes	28
f. Annual Lespedeza	28
5. Seeding Pastures	28
6. Contour Stripcropping	30
7. Planting Orchards and Vineyards on the Contour	31
8. Terraces - Standard	32
9. Establishing Sod Waterways	32
10. Open Farm Drainage Ditches	32
11. Enclosed Farm Drains	33
12. Farm Ponds	34
13. Tree Planting	35
14. Re-establishing Forest	35
15. Special Practice	35
SECTION II - MARKETING QUOTA PROGRAMS	36
A. BURLEY TOBACCO ALLOTMENT AND PRODUCTION DATA	39
B. FIRE-CURED TOBACCO ALLOTMENT AND PRODUCTION DATA	40
C. FLUE-CURED TOBACCO ALLOTMENT AND PRODUCTION DATA	41
D. SUN-CURED TOBACCO ALLOTMENT AND PRODUCTION DATA	42
E. 1951 PEANUT ALLOTMENT AND PRODUCTION DATA	43

	Page
SECTION III - PRICE SUPPORT PROGRAMS	44
A. COMMODITY LOAN PROGRAM - 1951	44
B. 1951-CROP FRESH APPLE PURCHASE PROGRAM	45
C. SUMMARIES BY COUNTIES OF 1951 COMMODITY LOAN PROGRAM	46
a. Wheat	46
(1) Warehouse Storage	46
(2) Farm Storage	47
b. Corn	47
(1) Warehouse Storage	47
(2) Farm Storage	48
c. Soybeans	48
(1) Warehouse Storage	48
(2) Farm Storage	48
d. Barley	48
(1) Farm Storage	48
e. Peanuts	49
(1) Farm Storage	49
SECTION IV - TOBACCO CROP INSURANCE PROGRAM IN VIRGINIA	50

SECTION I - THE AGRICULTURAL CONSERVATION PROGRAM - 1951

The population of the United States is increasing at the rate of 7,400 per day. That many extra mouths must be fed tomorrow. About 2,700,000 extra persons must be fed a year from now. In 1975 the increase will be equal to a fifth person seated at the Nation's table for every four today.

Food, feed, and fiber will be needed in bumper proportions to keep pace with this growing population. Where will this production come from? At one time, when our acres were worn out, we would just move West -- plow up new land. We are approaching our land frontiers. Our acres have shrunk horizontally to $2\frac{1}{4}$ acres of cropland per person for all his needs. Worse still, these acres are shrinking vertically, too; today down to five inches of topsoil compared to nine inches only three centuries ago.

The Agricultural Conservation Program is a means whereby the public interests are protected through the preservation of that thin band of topsoil which produces most of our food and fiber. It offers assistance to farmers who cooperate by carrying out needed conservation practices. These include the use of lime and fertilizing materials, establishing cover crops, pasture practices, forestry management, stripcropping, and certain earth moving practices such as terracing, drainage, and building farm ponds.

The amount of assistance received by farmers under ACP varies according to the practices performed, but usually covers about half or a little better than half of the cost. Payments are made in cash and in conservation materials such as fertilizer or seed.

It will be noted in reviewing the following pages that all counties do not use the same practices for effecting conservation. This choice is left up to local PMA county committees who select from a State ACP Handbook the practices best suited to their own farming conditions.

Not only does ACP serve the public by helping to assure future food supplies, but it also helps to maintain a higher standard of living for our population. In addition to the conservation for which ACP lends assistance, it has served to educate farmers in conservation farming. The extensive use of lime, phosphate, and cover crops are examples of a trend inspired to a great extent by ACP.

The returns through increased yields and lower production costs far out-weigh the amount invested by the Government through ACP. In fact, a penny per pound increase in the cost of our domestic foods resulting from neglect of conservation and resultant decline in production would cost consumers ten times as much as the cost of ACP.

A. STATE SUMMARY OF ACREAGE DATA - 1951 ACP
(Participating and all farms in county)

SECTION II - MARKETING QUOTA PROGRAMS

When there is an oversupply of a commodity the market is glutted, and the price often drops to the point that the growers stop producing. Both growers and consumers suffer. When there is an acute shortage of a commodity, growers profit on the little they have to sell, and the price often goes up to the point where the consumers will not buy. Again both growers and consumers suffer. Marketing quotas attempt to adjust both situations.

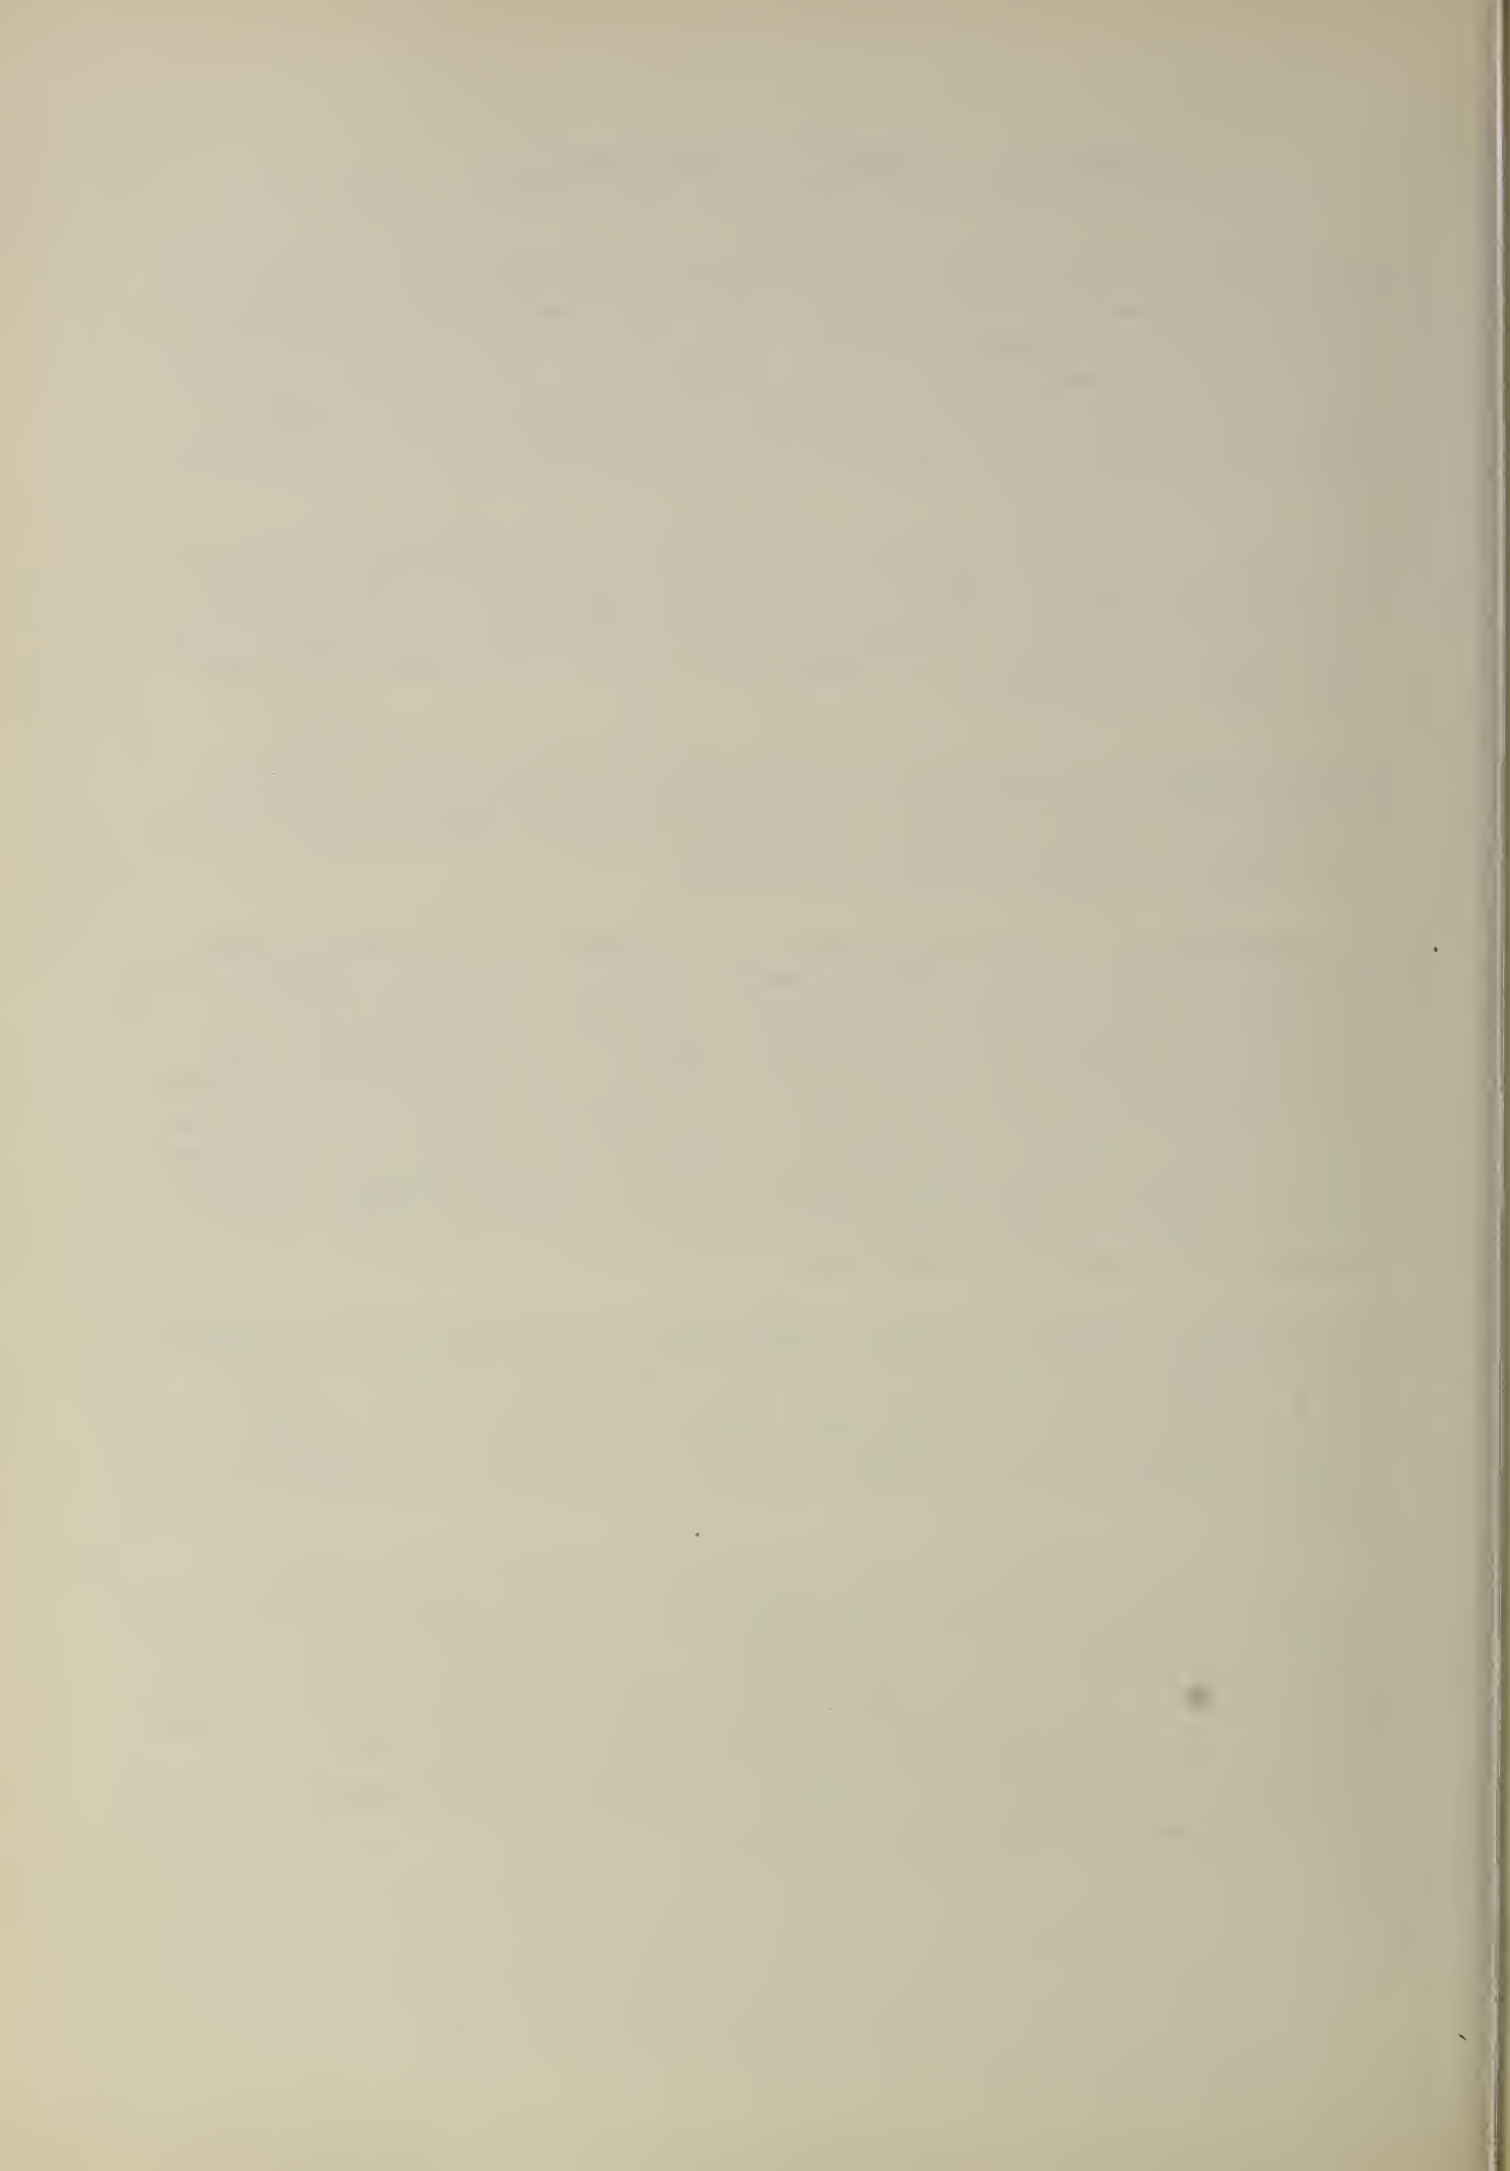

By keeping the amount produced fairly equal to the expected amount to be consumed, growers receive and consumers pay a fair price. Under such balanced conditions there is orderly marketing, no wasted production, and still better, no wasted soil fertility and labor that goes into surplus production.

Marketing Quota Programs in Virginia during 1951 operated on peanuts and the four types of tobacco grown here. In other years they have also been in effect on cotton, but were removed in 1951 because of the short supply and great demand for cotton.

The authority for Marketing Quotas is contained in the Agricultural Adjustment Act of 1938, and amendments thereto. This Act empowers the Secretary of Agriculture to declare a national marketing quota on certain basic commodities when total supply at the beginning of the marketing season (carry-over stocks plus expected production) exceeds what the law defines as the proper reserve level. However, marketing quotas do not become operative until approved by growers in a referendum by at least a two-thirds majority of the growers voting. Quotas are, of course, either approved or disapproved on a national basis covering all areas of production.

The national marketing quota is expressed in the usual unit of measurement (pounds or bushels), but to facilitate apportionment to States it is translated into acres on the basis of recent yields. These "acres" are allotted to individual farms on the basis of a number of factors including size of farm, amount of cropland, and production history.

In 1951 Burley, flue-cured, and Virginia sun-cured tobacco farmers produced the second crop under three-year quotas, approved in separate referenda, for the years 1950-1951-1952. The 1951 fire-cured tobacco crop was the last to be produced under quotas approved in 1948. On December 7, 1951, Virginia fire-cured tobacco growers voted to extend quotas to the 1952-1953-1954 crops by a vote of 4,216 to 89, a percentage of 97.9, in favor of quotas. Growers in other States voted in favor of quotas in comparable majority.

Marketing Quota Programs - Continued

Not only do quotas limit production to the quantity which the market can absorb in an orderly manner, but they assure a fair price to the grower. When quotas are in effect, growers who plant within their acreage allotments and otherwise abide by quota regulations, are assured of price support at a level defined by law, which in the case of all types of tobacco is 90 per cent of parity and for peanuts 88 per cent of parity for 1951, and which has been increased to 90 per cent of parity through 1954.

Tobacco prices are supported to individual farmers who harvest within their acreage allotments by non-recourse loans made to the farmers producing the tobacco. Loans are made during the regular marketing seasons through growers' cooperative associations under contract with Commodity Credit Corporation. The grower is assured of a price equal to the loan rate since he may negotiate a non-recourse loan on any particular lot of tobacco for which the auction price on the warehouse floor is not above the loan level for the particular grade. Tobacco placed under loan is later sold by the cooperative association, and any profits above all costs, such as re-drying, packing, and storing, are prorated to the original growers.

The following summarization shows by kinds of tobacco for the 1951 crop (1) total sales, (2) value, (3) average price per pound, (4) loan rate, and (5) per cent taken under loan.

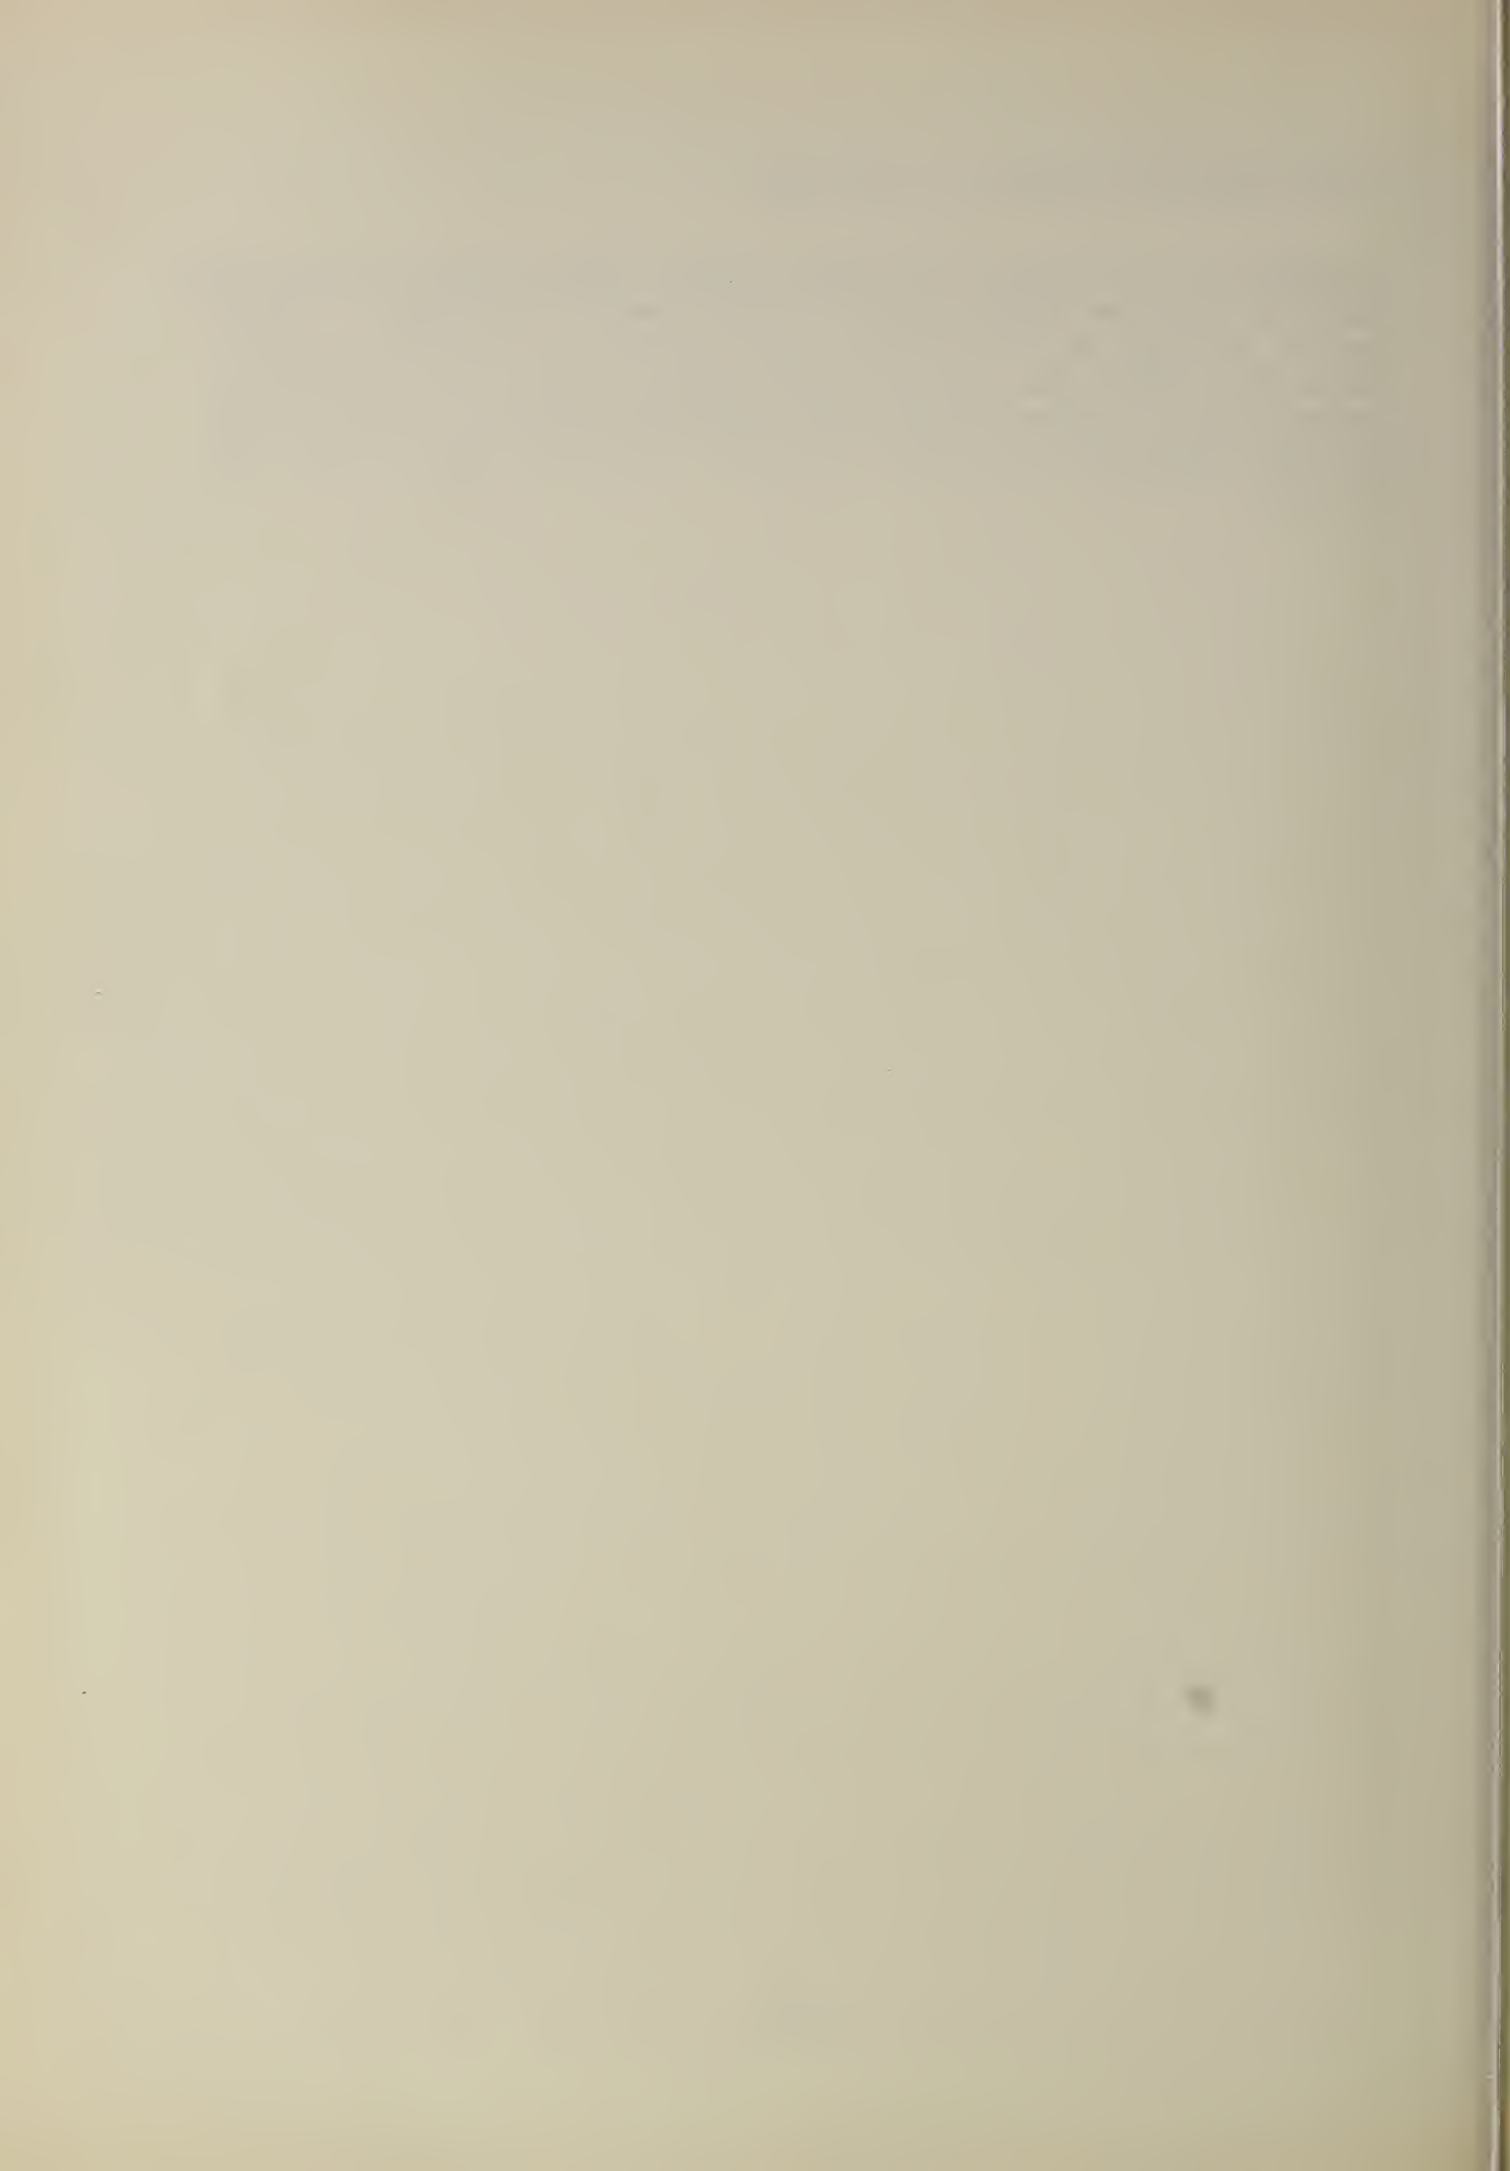

<u>Type of Tobacco</u>	<u>Total Sales (Million Lbs.)</u>	<u>Value</u>	<u>Average Price</u>	<u>Loan Rate</u>	<u>Per Cent Placed Under Loan</u>
Burley (Type 31)	617.1	\$315,798,891	51.2	49.8	15.8
Flue-cured (Types 11-14)	1441.6	759,248,349	52.7	50.7	9.9
Va. Fire-cured (Type 21)	13.4	5,267,349	39.2	37.4	19.2
Va. Sun-cured (Type 37)	4.0	1,381,816	34.6	33.2	1.5

The price of the 1951 crop of peanuts was supported to growers who harvested within their acreage allotments through an arrangement between Commodity Credit Corporation and regular peanut buyers. In brief, this arrangement consisted of contracts between such parties whereby the buyer agreed to pay producers not less than support price for within quota peanuts.

The foregoing is not intended to cover price support operations on tobacco and peanuts, but to point out the close relationship between the allotment and support programs. Obviously, growers should be

Marketing Quota Programs - Continued

assured of a fair price for crops produced under acreage restrictions, while at the same time it would be most unwise to attempt to support prices on crops in overabundant supply without some control on the amount of production. To accomplish this objective of controlling production to required amounts and assuring growers of a fair price for the commodities produced, allotments and price supports go hand in hand.

SECTION III - PRICE SUPPORT PROGRAMS

A. Commodity Loan Program - 1951

The Commodity Loan Program undoubtedly stabilizes marketing especially when there is heavy production. For example, the 1951 wheat crop in Virginia of 7,497,000 bushels was 11 per cent higher than the 1950 crop, and almost up to average although the acreage in 1951 wheat, 357,000 acres, was the lowest on record. Had not Virginia growers placed 7 per cent of the wheat crop under price support loans, the average price for the 1951 crop of \$2.13 per bushel might have been even lower. Despite the fact that growers utilizing warehouse-stored loans in 1951 were required to absorb the storage charges, the net return under price support was usually higher than the market since the base support rate was \$2.33 to \$2.39, varying by counties. Wheat farmers took out 1,116 loans on 509,068 bushels with a loan value of \$1,099,555.78. Approximately 10 per cent of all wheat loans were redeemed by the producers with the remainder under loan taken over by CCC at maturity date.

The situation on corn was somewhat different. The average price in Virginia for the 1951 crop was \$1.85 per bushel compared to an average support rate of \$1.73. There were only 128 corn loans made, on 132,789 bushels, with a loan value of \$220,835.79. About 82 per cent of that amount, or \$180,983.58, was redeemed by farmers.

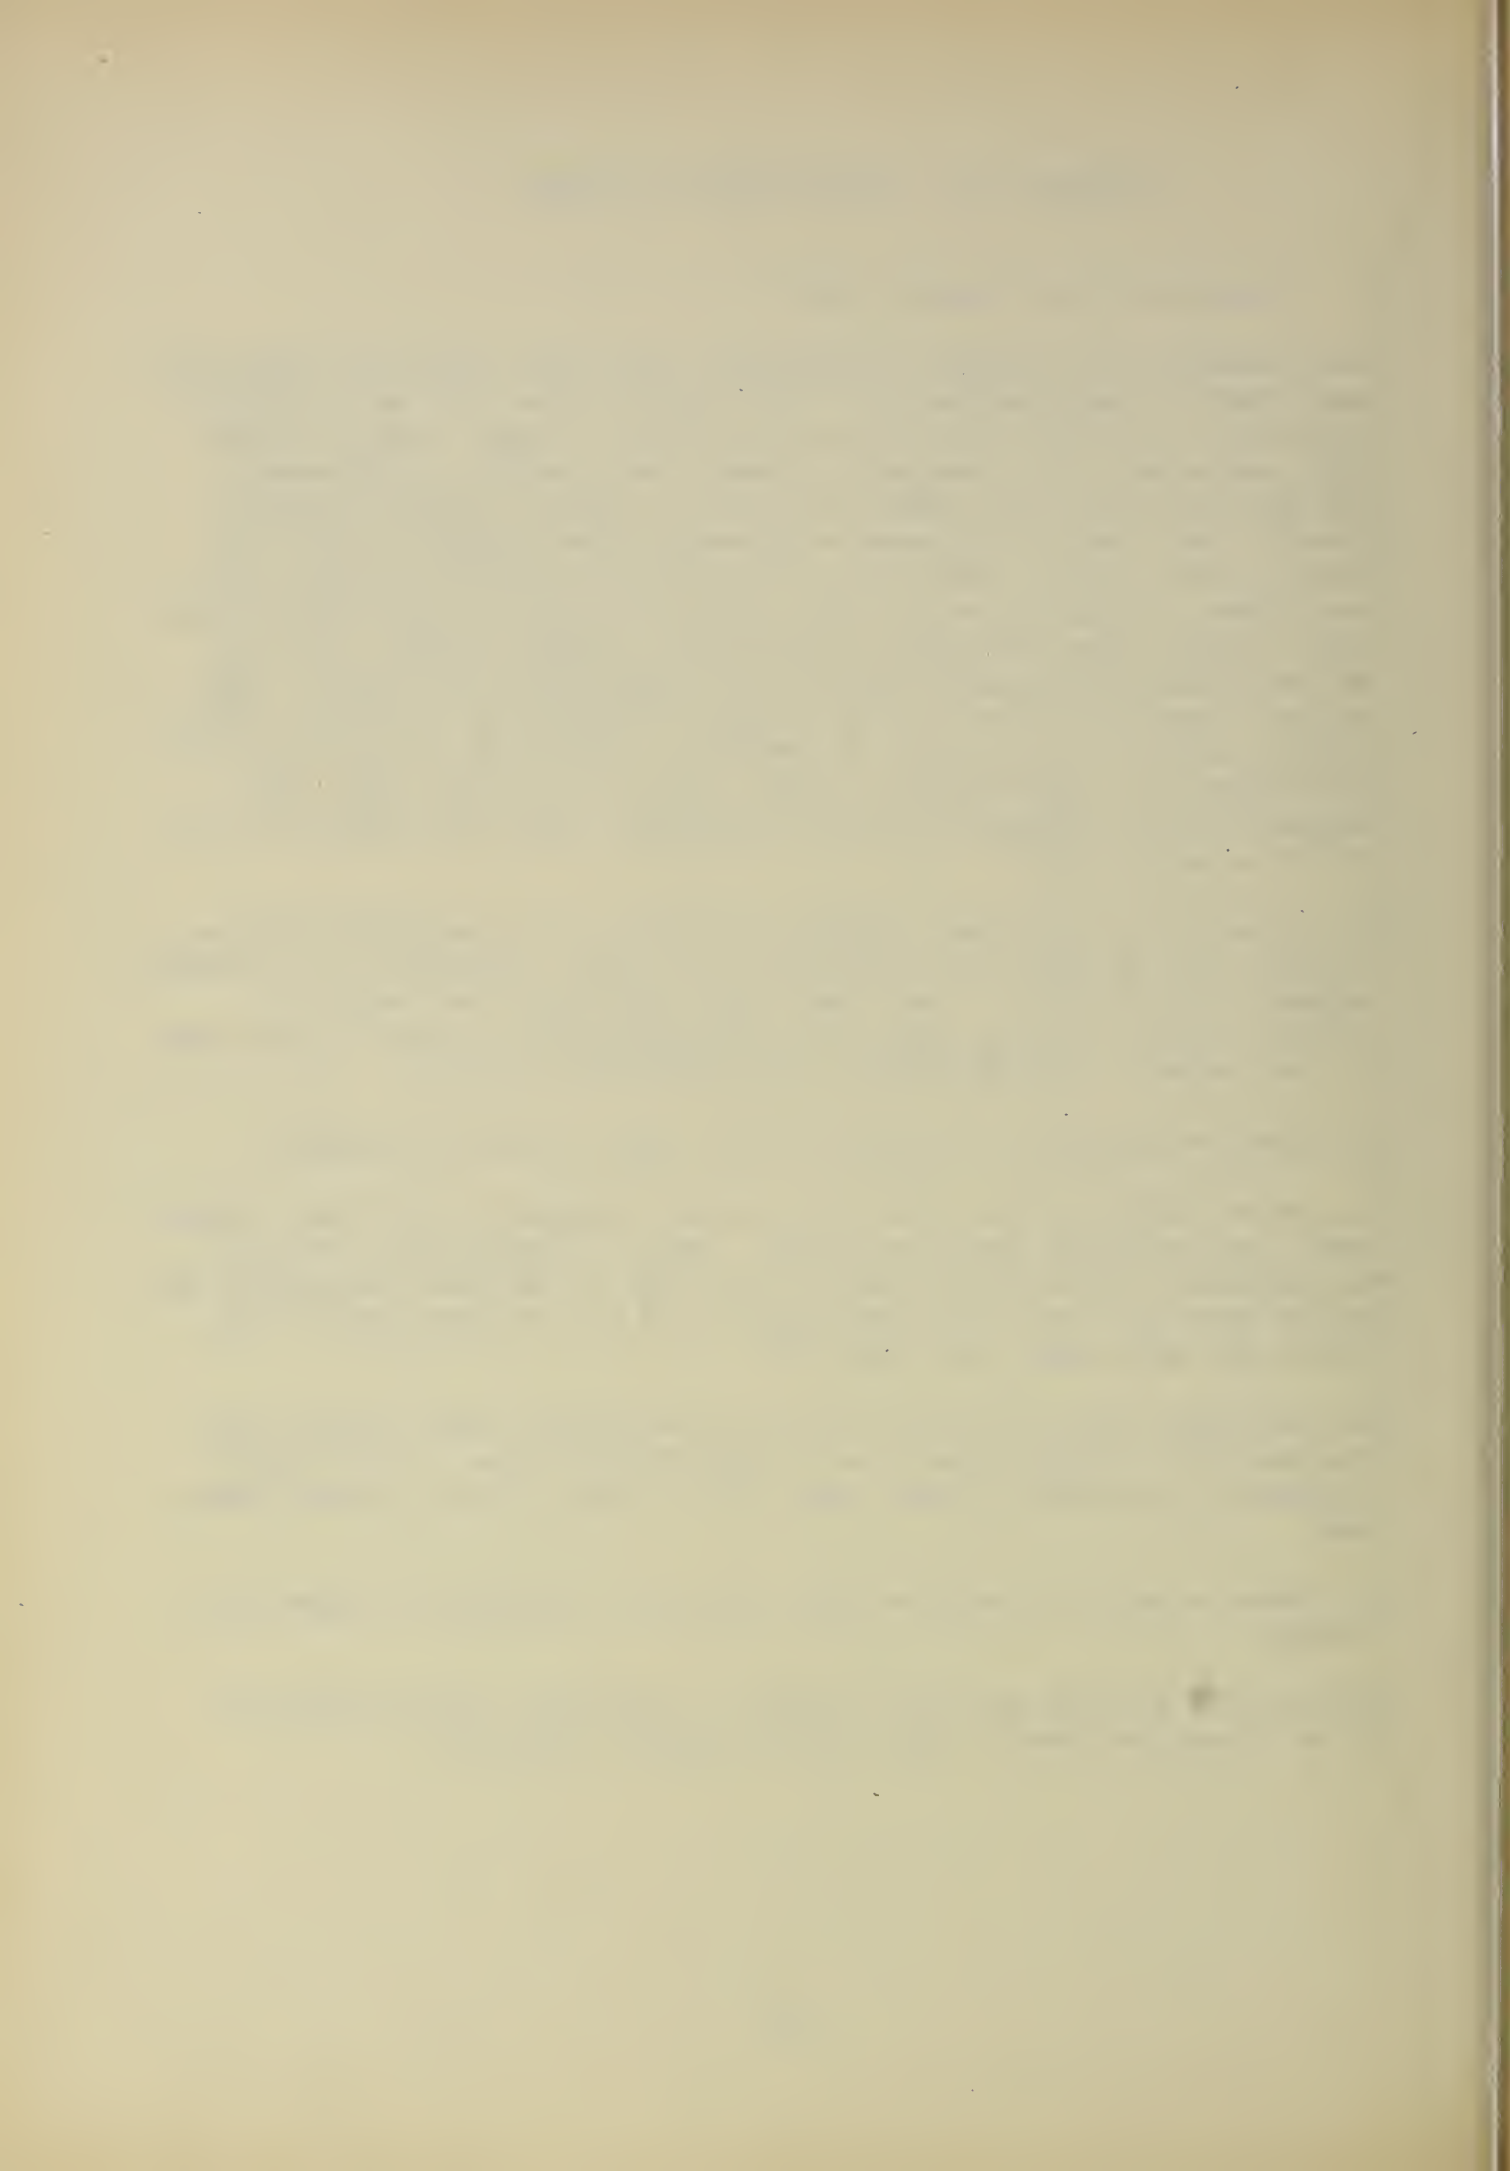

CCC loans were made on 76 bales of 1951 crop cotton in Virginia.

At the beginning of the season the market dropped to about the average loan level of 32.48 cents per pound. Within a few months, after it was apparent that the crop was not as large as had been estimated, the market went up 6 or 7 cents per pound, and for the remainder of the season was well above the loan rate.

The favorable price of cotton later in the season made possible the repayment of a large proportion of the 1951 CCC loan. In Virginia repayments by producers were made on 75 of the 76 bales placed under loan.

The above as well as data on other loans are tabulated on pages following.

More public storage and more storage on individual farms continued to be a pressing need to make price supports effective.

B. 1951-Crop Fresh Apple Purchase Program

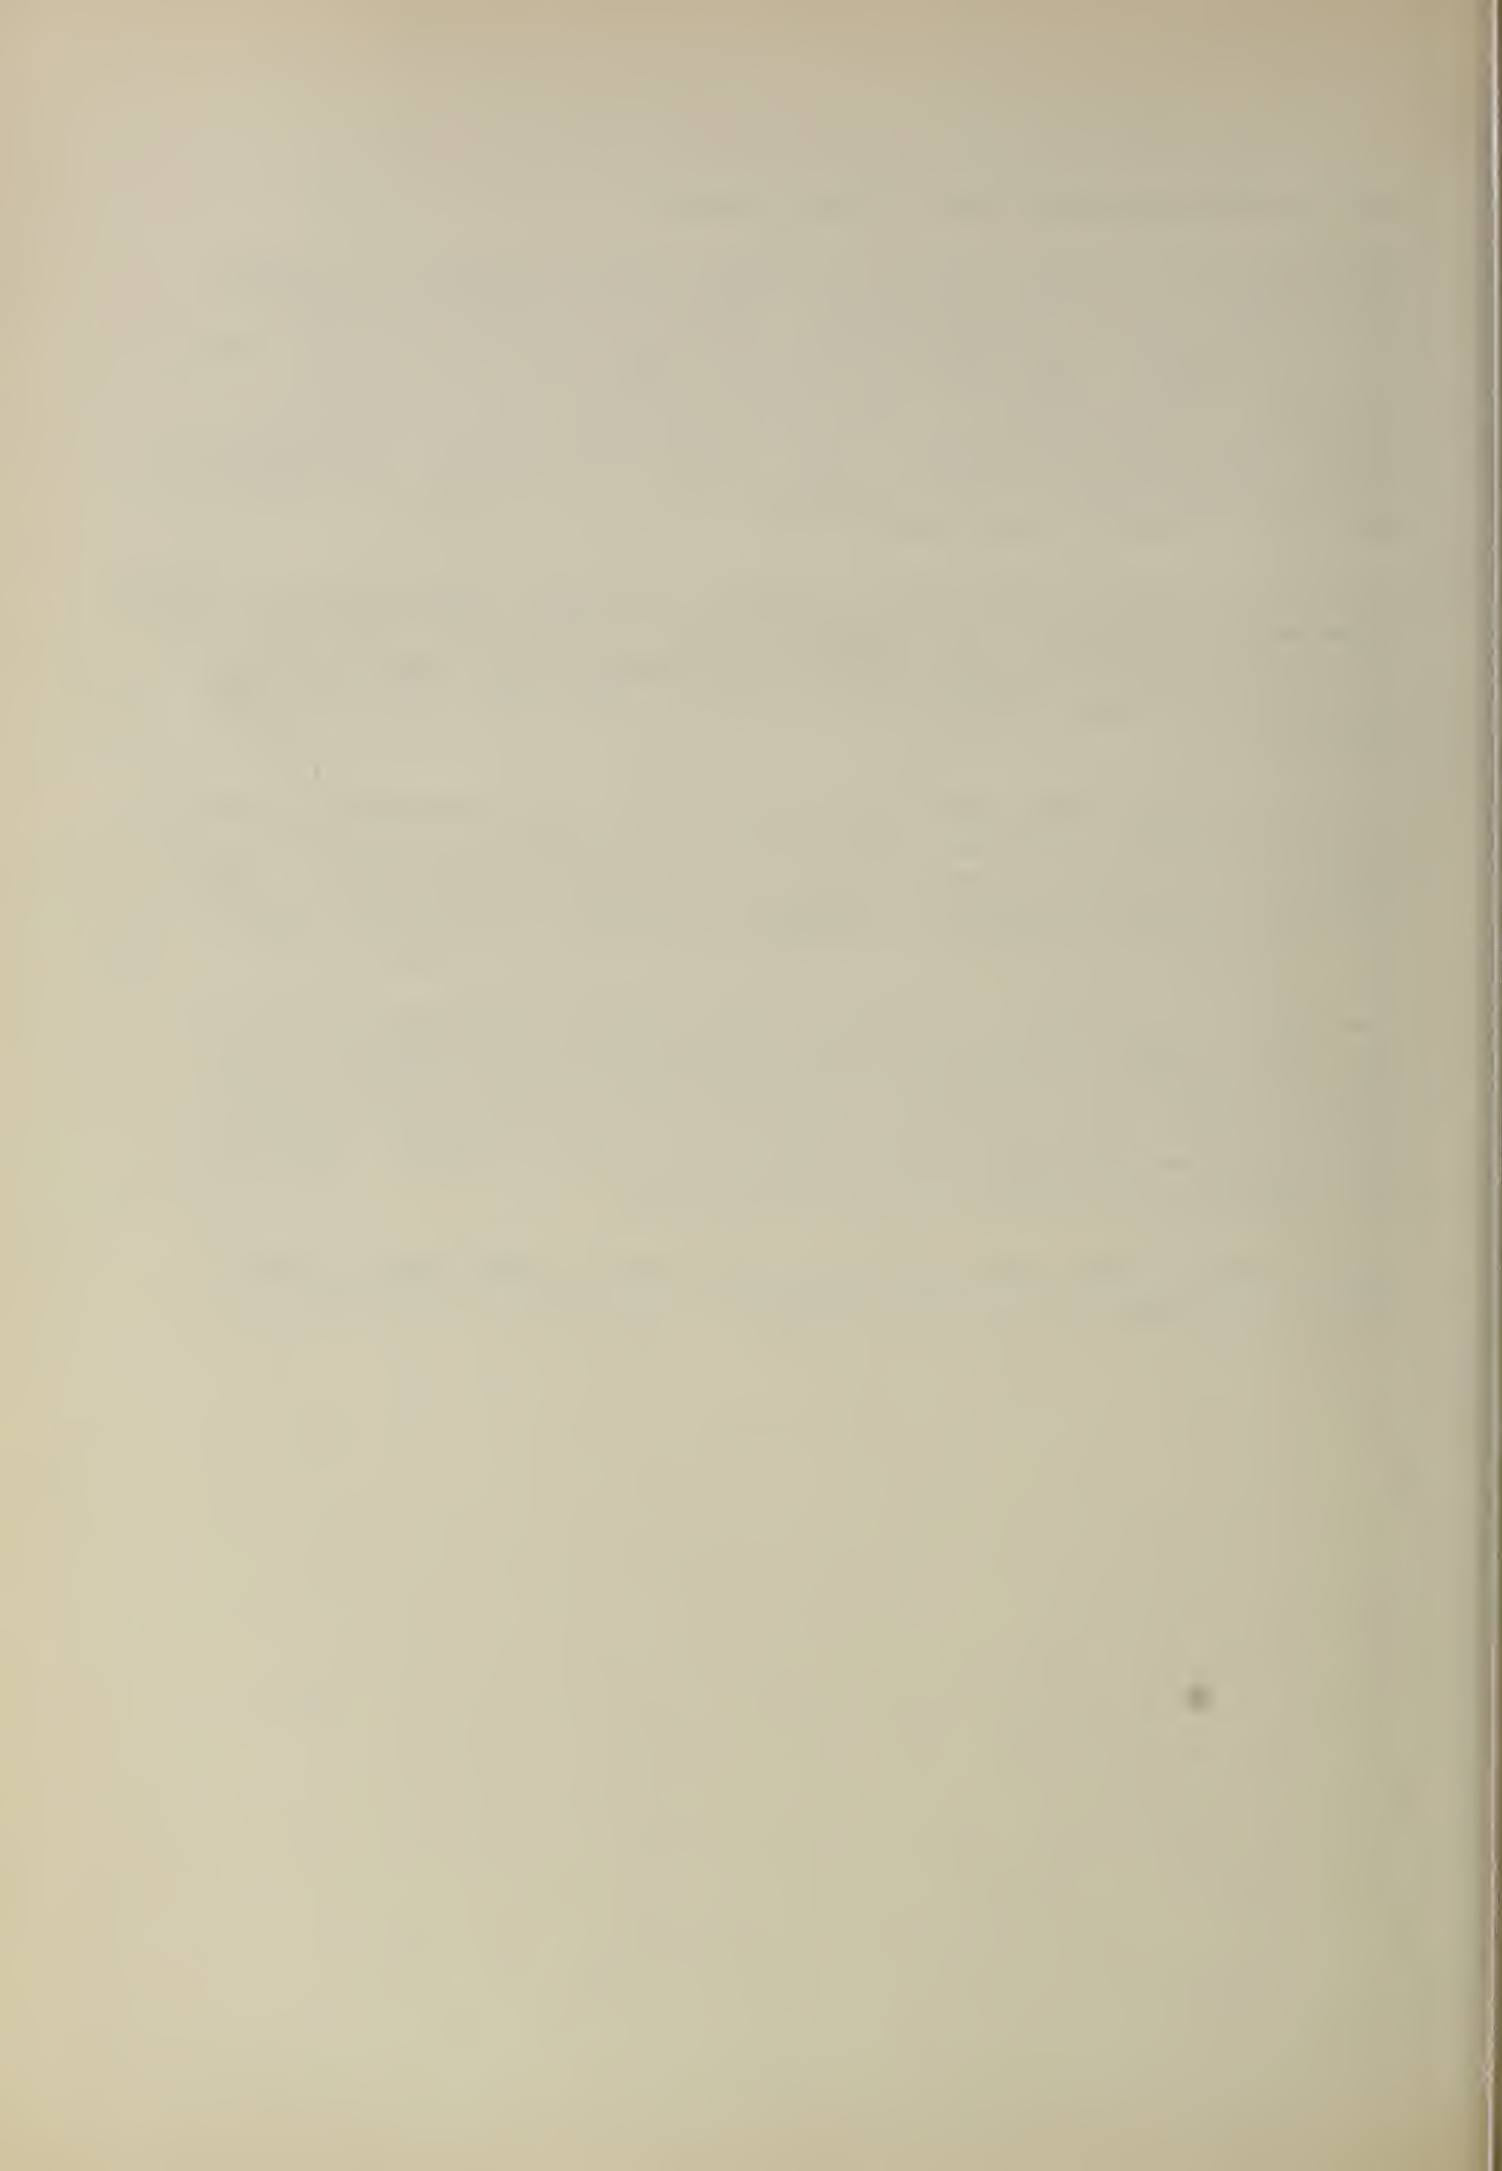

The purchase of fresh apples of the 1951 crop in Virginia extended from October 1951 through February 1952 as a Section 32 surplus removal program. Offerings were in far less volume than in the two preceding years, thus it was possible to dispose of the entire purchases within Virginia. Distribution of the fruit was made to public and parochial schools, and to State institutions and hospitals. Purchases amounted to 22,415 bushels, the equal of about 32 carlots, and total commodity cost was \$39,130.40.

During the harvest season the acceptable varieties were Golden Delicious, Rome Beauty, Stayman, York Imperial, Grimes Golden, and Jonathan. In January and February Grimes Golden and Jonathan were dropped in favor of Albemarle Pippin and Winesap in keeping with the usual marketing practice.

A feature of the 1951 apple program was the price difference for size. To be acceptable, the fruit was required to be $2\frac{1}{4}$ inches minimum in diameter, U. S. No. 1 grade, with a price of \$1.60 per bushel. Fruit in size $2\frac{1}{2}$ inches diameter or larger was priced at \$1.80 per bushel. Also a premium of 10 cents per bushel was placed on wrapped packs.

The amount of purchases in Virginia was entirely disproportionate to the total production in this State in comparison with others in the eastern apple area. A chief reason for this was serious hail damage that occurred throughout certain parts of Virginia's apple country rendering the fruit unsuitable to meet U. S. No. 1 grade. Thousands of bushels were rejected on this score alone.

Apple market conditions thus far in the fall of 1952 have not been such as to require a purchase program to be placed in operation.

SECTION IV - TOBACCO CROP INSURANCE PROGRAM IN VIRGINIA

The Tobacco Crop Insurance Program has been expanding rapidly in Virginia since its initiation in 1945. The year 1953 will witness the ninth year of successful operations and one of many changes and improvements.

Lunenburg and Appomattox counties reached their required minimum premium reserve and were eligible for the 30% premium reduction in 1952. Individual growers in Lunenburg and Pittsylvania counties through continuous participation received a 25% reduction in premium for good experience; that is, seven consecutive insured tobacco crops without a loss for which indemnity was paid. In Lunenburg County this meant a total reduction in premium of 55% for some insureds.

Two new counties were added in 1952; namely Charlotte and Patrick, bringing the total to eleven. Only one new county will be added in 1953, the selection of which has not yet been made.
